BUILT TO SURVIVE**

## Weigh Belt Diverter Valve

Thayer's MXL Weigh Belts can be equipped with a pneumatically actuated diverter gate valve. This valve allows you the convenience of diverting material away from the process for clean up after a days run, or it can be used for taking material samples to check calibration.

The Thayer diverter valve is constructed of all stainless steel, with sanitary design as an option. Complete assembled controls including fittings, tubing, mounting hardware, solenoid valve and proximity limit switches.

Symmetrical mounting flange facilitates attachment to Thayer Model MXL Weigh Belts in one of two orientations.
