BUILT TO SURVIVE**

Thayer Local/Remote Operator Station

**Stand Alone (remote) Operator Station
(shown in NEMA-4X Enclosure)**

**Operator Station (local)
Side Mount of PCA**

Thayer Scale provides, as an option, an Operator Station that includes a Hand-Off-Remote selector switch, hand start and stop push buttons, and a hand speed adjust potentiometer. These controls can be mounted on the front face or the hinged side of the optional NEMA-4 or NEMA-4X enclosure. Alternately, a stand alone Operator Station is available in a NEMA-12, NEMA-4/4X or NEMA-7 enclosure. This option is ideal for operating the system locally at the equipment, independent of the instrument and/or host supervisory control system. The remote stand alone option is ideal for installation/use local to the equipment when the drive and instrument are installed remote from the feeder.
