

**BUILT SMART
BUILT TO SURVIVE**

Start-Up Service and THAYER Product Training School

Start-Up Service and THAYER Product Training School

Thayer Scale designs and manufactures equipment that is **BUILT TO SURVIVE** and provide long lasting operation in industrial environments. As with all precision weighing equipment, your Thayer Scale equipment will function best when start-up, routine service and repairs are done by a factory-trained service representative.

Start-Up Service: Factory-trained service representatives are strategically placed around the United States. Our service department has an outstanding record of longevity, experience and achievement. Thayer's technicians are available for start-up support, inspection, diagnosis and repair services, routine maintenance and calibration services, and material testing. and are available for start-up, emergency, scheduled contract, and routine/preventative maintenance.

Prior Generations:

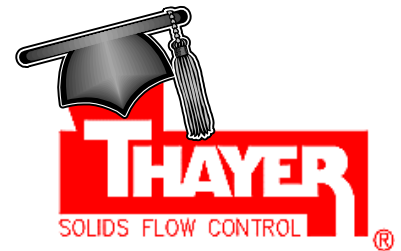

Thayer Scale has the expertise to service your prior generation Thayer equipment, restore it to proper operation or upgrade it to current generation. With such rugged construction, customers still have feeders and belt scales in operation after decades of service. Our people are available to inspect and recommend the correct instrumentation upgrade that will allow many more years of use from your older machine.

Thayer "University" - Maintenance and Operator Training

A Thayer Scale factory trained representative is available for on site customer training of maintenance and equipment operating personnel. Thayer Scale also offers a comprehensive formal training school located at it's headquarters in Pembroke, MA, 30 minutes south of Boston. Each training class is tailored to the specific equipment used in your facility. Manuals are put together that contain the standard factory manual sections, the associated drawings and documentation relating to feeder and drive programming particular to your installation and further enhanced by the addition of the training aids used for class.

The schools objective is to provide comprehensive, hands on training of all aspects of Thayer equipment including operating and maintenance procedures. Many Thayer customers have taken advantage of our training school and have found the return on the investment well worth the time and expense.

For more information about schedules and rates contact Thayer's service department.
